

GT/S / Enlarged Quad Leg Master Link Assembly

This master link assembly for Triple and Quad Leg chain slings in assembled or welded systems. Consists of an A/S Master Link and two B/S Transition Links. A flattened section on the transition links opens up additional, universal connection possibilities (measurements can be obtained from the product "B/S"). Thanks to the use of T/S Enlarged Master Links, this master link assembly has larger inside dimensions than the G/S Quad Leg Master Link Assembly and can thus also be used for the next size up crane hooks.
