

GHK/S / Clevis Foundry Hook

This hook comes with an extra-wide jaw and is used in applications where other hooks simply aren't up to the job. The model is frequently used in foundries and the clevis system means that linking the hook to the chain is quick and easy, without the need for a connecting element.

This extra-wide hook has a lot to offer – but please avoid tip loading and ensure that it is used in **straight pull only**.
